

Aquaspector AQS-31-TC

with temperature control

The AQS-31-TC is based on the model AQS-31 but the measuring chamber can be set to a particular temperature. This is needful if the aw-value has to be determined at a specific temperature. The adjustable range is between 10°...35°C. Other technical data are the same as the AQS-31-TC.

This instrument is a good choice for measuring a big variety of products with high a also low aw-values.
