

Syncore® Analyst

Economical high quality concentration

The Syncore® Analyst offers efficient, gentle and environmentally friendly parallel concentration. With its clever design cross-contamination can be inhibited and recoveries are maximized. Profit from the wide range of complementary products to tailor your sample workup to your needs.

Efficient

Increase productivity by concentrating up to 12 samples simultaneously

High quality results

Maximize recoveries and eliminate the risk of cross contamination

Time savings

Fast Vortex concentration maximizes throughput to a predefined residual volume

Syncore® Analyst: Your most important benefits

Efficient

- Improve your sample throughput by concentrating up to 12 samples to a residual volume
- No need of nitrogen saves operational cost
- Small foot print saves expensive lab space
- Optimize your process by combining the solid phase extraction and the concentration

High quality results

- Eliminate the risk of cross contamination due to a clever design
- Integrated solid phase extraction (SPE) eliminates contamination risks
- High recovery rates due to smooth sample processing (up to 100 % solvent recovery)

Time savings

- Save time by using the fast and proven parallel Vortex evaporation technology
- Increase productivity by fast concentration of up to 12 samples in parallel
- Concentrate to a predefined residual volume allows a unattended workup

Complete your portfolio

SpeedExtractor
E-916 / E-914
Pressurised solvent
extraction

Syncore®
SPE
Parallel concentration and
solid phase extraction

Vacuum Pump
V-700
The economical
vacuum source

Recirculating Chiller
F-114
The efficient way of
cooling
